DETAILED ACTION

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claims 1-7 are currently pending with the application.

The examiner has considered the IDS filed 11/08/2004.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Tuller et al (US 5,403,461).

The use of phrase "for thermistor devices" in the claim-1 has not been treated with patentability. A recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art. See In re Casey, 152 USPQ 235 (CCPA 1967) and In re Otto, 136 USPQ 458, 459 (CCPA 1963).

Art Unit: 1751

Tuller et al teach a sintered compact bar of a solid electrode/electrolyte containing solid solutions of the type ABO₃ such as $(La_{1-j}Sr)(Al_{1-k}Mn_k)O_3$, wherein the A-cations include rareearths such as Y, Nd, Sm; $0 \le j < 1$; $0 \le k \le 1$ (Col-11, Ln 41-44; Col-7, Ln 19-20; Col-5, Ln 25-29, 38-43). All the limitations of the instant claims are met.

The reference is anticipatory.

 Claims 1 and 5-7 are rejected under 35 U.S.C. 102(e) as being anticipated by Ogata et al (US 6,878,304).

Ogata et al teach a temperature sensor containing a thermistor formed from a mixed sintered body with the composition (M1M2)O3.AOx, wherein M1 is at least one element selected from Ca, Sr, Y, Sm, Yb; M2 is at least one element selected from Al, Mn and AOx is silica (Abstract, Col-2, Ln 38-66; Fig-2A). All the limitations of the instant claims are met.

The reference is anticipatory.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kallambella Vijayakumar whose telephone number is 571-272-1324. The examiner can normally be reached on 8.30-6.00 Mon-Thu, 8.30-5.00 Alt Fri.

The documents cited by EPO search report dated 16.09.2004 have been considered and they fail to teach or suggestive of the claims by the applicants.

Applicants are suggested to claim a thermistor device by incorporating the limitations of the claim-2 in to claim-1 to overcome the prior art of record.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Douglas McGinty can be reached on 571-272-1029. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Application/Control Number: 10/724,253
